sinus

Expanding the original concept of tree grates Sinus, it was created a number of separate benches with an unmistakable expression. Strong steel plates easily bent on a slightly trapezoidal profile as in the case of the longest bench reinforced with an almost invisible rib rendering a totally solid shape. The dot perforation is a throwback to the genuine aesthetics of the 1960s. The combination with a unique seat pattern Cit.pin with plastic 'button pads' thermally isolates the unpleasantly cold metal while providing the ultimate sitting comfort. A subtle yet important detail is the option of having the bench optically "grow" right out of the pavement.

The galvanized steel sheet structures are also available cured with powder coating or left without surface finish. The Citépin seat thermally isolates the steel surface and thus provides superior comfort.
